

2007 TOP DOCTORS

Dr. Grekos on Capitol Hill with a letter of gratitude from the President and Mrs. Bush

“One of the most important qualities of a top doctor is that he listens to the patient and then provides the best possible care with respect to that individual.”

— DR. ZANNOS GREKOS

ZANNOS GREKOS, M.D.

NAPLES TOP CARDIOLOGIST

To Cardiologist Zannos Grekos M.D., “a top doctor is someone who thinks outside the box, in other words, a physician who considers innovative techniques or new applications of standard therapies to benefit individual patients”. Dr. Grekos is a top doctor and his call to action is to lead the world in Adult Stem Cell therapy. His Regenocyte™ Therapy is helping patients with heart disease and peripheral vascular disease heal themselves by taking the patient’s own Adult Stem Cells and injecting them back into their heart or legs. “We are able to treat patients now, who otherwise would not have other options by treating heart attack damage, heart failure, poor circulation and chest pain.” Currently, the therapy is undergoing FDA approval and patients must travel to outside the United States to complete the treatment. So, Dr. Grekos has brought this cutting edge treatment to patients who wouldn’t otherwise have access to it, close to the United States. To that end, Dr. Grekos has instituted therapy programs and trained staff at treatment facilities close to the U.S. where the minimally invasive procedures can take place. His goal is to eventually bring these treatments to U.S. soil.

Dr. Grekos graduated from the University Of South Florida College Of Medicine, and completed an Internal Medicine Residency in 1992 and a Cardiology Fellowship in 1996. Since then, he has been practicing Cardiology and branched into working with treatment centers across Asia to develop new Stem Cell therapies. Last February, Dr. Grekos was invited to Capitol Hill in Washington D.C. to brief the United States Senate Health Advisory Staff on the current state of Stem Cell Research and Therapies performed around the world. Further, Dr. Grekos has been invited as a guest lecturer to numerous international scientific presentations on the success of Regenocyte™ Therapy. Locally, Dr. Grekos and his staff operate out of The Heart and Vascular Institute, a state-of-the-art facility in Bonita Springs, that includes Nuclear Cardiology, Cardiac Catheterization, Peripheral Vascular Ultrasound and Stress testing. This facility is a complete diagnostic outpatient Cardiology Center that makes it possible for patients to get all of their medical needs taken care of in one place.

This top doctor is also a family man and entrepreneur. Dr. Grekos and his wife, Dr. Athina Kyritsis, a Pediatrician, have five children and boast the popular Greek Gourmet restaurants in Naples and Bonita Springs. Drs. Grekos and Kyritsis started the restaurants because, as he puts it, “We wanted a place that we could take our family for great Greek food.”

An innovator in Adult Stem Cell research, business and family man, Zannos Grekos has it all. But, he says, it all comes back to the patient, “One of the most important qualities of a top doctor is that he listens to the patient and then provides the best possible care with respect to that individual.” It is humbling for Dr. Grekos to extend and improve a cardiac patient’s quality of life or be able to avoid the amputation of a patient’s limb. Everyone will agree, that is what makes Dr. Grekos a top doctor.
